Press Release

June 2010

Intrinsic Perennial Gardens, Inc. is excited to announce **Sedum x 'Plum Perfection' PPAF**. This new Sedum is a sterile hybrid with bicolor pink flowers starting in August. The short clumping plants reach around 10" tall and wide and have shiny red stems and grey green new growth that age to plum giving the whole plant a bicolor look until the entire plant matures and becomes plum colored. Plants prefer well drained soil in full sun. Their hardiness is zone 4-9. These plants can be planted spring or fall. This new Sedum combines nice with other low growing Sedum plants like Sedum 'Thundercloud' PPAF. For more information and pictures, contact Brent Horvath at 800-648-2788 ext. 15 or brent@intrinsicperennialgardens.com.
