Press Release

March, 2009

Intrinsic Perennial Gardens, Inc. is excited to announce the second introduction in our cocktail series of Geum. The first one being a semi-double red called 'Sangria'. **Geum x 'Tequila Sunrise' PPAF** is a hybrid with bicolor flowers of cheery yellow dripping with grenadine colored tips. The single and semi double flowers start blooming in May and continue around three to four weeks. The short clumping plants reach around 10" tall and wide and have burgundy red stems reaching around 18+" tall and prefer a moist to well drained soil in full sun. The foliage is semi-evergreen. These plants are longer lived than many of the older seed grown varieties of Geum. Their hardiness is zone 4-9. These plants do their growing at the cool times of the season, so they can be planted spring or fall. This new Geum combines nice with other early bloomers like Polemonium 'Heaven Scent' PPAF. For more information contact Brent Horvath at 800-648-2788 ext. 15 or brent@intrinsicperennialgardens.com
