Press Release

April, 2012

Intrinsic Perennial Gardens, Inc. is excited to announce **Penstemon digitalis 'Pocahontas' PPAF**. This stunning new Penstemon will have the ladies stopping in their tracks. The irresistible combination of burgundy red new foliage in spring and pink flowers starting the beginning of June will have them talking. And if they don't take them all home the hummingbirds will come visit too. The clumping plants reach around 36" tall and have red stems which after flowering hold on and stay red until fall providing a third season of interest. Plants will grow in moist to well drained soil in full sun. Their hardiness is zone 4-9. This new Penstemon is a US native and combines especially nice with Amsonia x 'Halfway to Arkansas'. For more information and pictures contact Brent Horvath at 800-648-2788 ext. 15 or [brent@intrinsicperennialgardens.com](mailto:brent@intrinsicperennialgardens.com)
